

Course Summary

Safety is the most important factor in any aviation operational discipline and it is essential that everyone involved has a clear understanding of how safety can be managed within their area of responsibility.

This course aims to supply candidates with a comprehensive understanding of the development and implementation of a Safety Management System within an operational organisation to ensure safety objectives are maintained whilst supporting effective and efficient delivery of services.

Plans for the implementation of a Safety management System will result from training of gap analysis and a phased-approach style towards implementation.

As a standalone course, this training is delivered in 1-5 days. However, Global ATS can combine all Safety Management training into a single three-week course.

Course Curriculum

- Maintaining Safety Objectives
- Supporting Effective and Efficient Service Delivery
- Gap Analysis
- Phased-Approach Implementation

Who Is This Course For?

This course is designed for candidates looking to become an Air Traffic Management or Aviation Safety Management Specialist. However, it is equally valuable to Air Traffic Controllers and ATC Managers looking to broaden their understanding of Safety Management.

In addition, all candidates hoping to take this course must be able to demonstrate an excellent command of oral and written English, assessed to ICAO Level 4 English Language Proficiency at minimum.

Course Duration
1-5 Days

Group Size
4-8 Students
